Early home economics programs taught women how to cook a balanced meal, and included food safety and preservation. Additionally, they studied how to properly set a table and learned how to host meals, not only for their immediate families, but for larger groups as well. Endoplasmic Reticulum

- The name “endoplasmic reticulum” was coined in 1953 by Porter, who in 1945 had observed it in electron micrographs of liver cells.
- Endoplasmic reticulum, a name derived from the fact that in the light microscope it looks like a “net in the cytoplasm.” (Eighteenth-century European ladies carried purses of netting called reticules).

Morphology

- The Golgi apparatus is morphologically very similar in both plant and animal cells.,
- It is extremely pleomorphic : in some cell types it appears compact and limited, in others spread out and reticular (net-like).
- Its shape and form may vary depending on cell type.
- The detailed structure of three basic components of the Golgi apparatus can be studied as follows

1. Flattened Sac or Cisternae
2. Tubules
3. Vesicles
